EDUCATION

University of Technology
Communication Engineering
Optical Communication Systems
Baghdad · 2023 – 2027 (4th Year)

ACADEMIC SKILLS

- Mathematics & Physics
- Electrical Circuits
- Arduino & Electronics
- Optical Fiber Networks

LANGUAGES

English — B2 / C1
German — Learning
Arabic — Native

HOBBIES

- Boxing
- Reading
- Hands-on / DIY
- Self-improvement & Dev

PROFILE

4th-year Communication Engineering student at the University of Technology, Baghdad, with a strong self-taught background in Python development, AI integration, and full-stack application building. I specialize in building intelligent desktop apps, Telegram bots, RAG systems, and backend services — combining engineering foundations with modern AI tooling to ship real, working software.

PROJECTS

Sumer AI | *AI Desktop Assistant*

- ▶ Open-source Arabic-first AI desktop chat app powered by Google Gemini 2.5 Flash.
- ▶ Built a full RAG system - users upload PDFs/DOCX/PPTX and chat with their documents using ChromaDB + Gemini Embeddings; answers include source & page number.
- ▶ Features: LaTeX math rendering, SQLite persistent chat history, Word/Excel document generation, DOCX→PDF conversion, adaptive AI personality, and RTL Arabic support.
- ▶ Includes a complete HWID-based license & activation system built on Supabase (key gen, device binding, 30-day expiry).
- ▶ Tech: Python, CustomTkinter, Google Gemini API, ChromaDB, Supabase, SQLite, python-docx, openpyxl.

Personal Portfolio Website | *Frontend / Full Project*

- ▶ Designed and developed a personal portfolio website from scratch using HTML & CSS.
- ▶ Hosted on GitHub Pages at 23uta.github.io/portfolio - showcases projects, skills, and contact info.

Sumer Schools System (SSS) | *SaaS - In Progress*

- ▶ Building a SaaS platform for Iraqi schools - covering student management, scheduling, and reporting.
- ▶ Full-stack Python backend with cloud database via Supabase; web frontend in progress.

Telegram Bots & Automation Tools | *Python / Various*

- ▶ Built multiple feature-rich Telegram bots: task automation, AI Q&A, data management, and real-time interaction.
- ▶ Various Python automation scripts and web scraping tools published on GitHub (github.com/23uta).

Client Website | *Freelance Web Project*

- ▶ Developed a website for a client - handling design, development, and deployment independently.

SKILLS

Languages: Python (primary), HTML, CSS, JavaScript (basic)

AI & ML: Google Gemini API, Prompt Engineering, RAG systems, Vector Databases, ChromaDB, Sentence Transformers

Backend & DB: REST API integration, SQLite, Supabase (PostgreSQL), Web Scraping

Development: Desktop App Dev (CustomTkinter), Telegram Bot Dev, Git & GitHub

Engineering: Optical Communications, Arduino, Classic Control Systems, Circuit Analysis

Concepts: OOP, Clean Code, Automation, Semantic Search, AI Memory Systems
